Certificate: 81-A-0046

Site

(b)(6), (b)(7)(c)

Inspection

Type: ROUTINE INSPECTION

Date: MAR-15-2006

3.1 (e)

HOUSING FACILITIES, GENERAL.

- Supplies of food and bedding must be stored in a manner that protects the supplies from spoilage, contamination, and vermin infestation. The supplies must be stored off the floor and away from the walls, to allow cleaning underneath and around the supplies. Foods requiring refrigeration must be stored accordingly, and all food must be stored in a manner that prevents contamination and deterioration of its nutritive value. All open supplies of food and bedding must be kept in leakproof containers with tightly fitting lids to prevent contamination and spoilage. Only food and bedding that is currently being used may be kept in the animal areas.
- In the dry food storage area, three bags of dog food are open and not in leakproof containers.
- When the factory sealed bags of food are opened, they must be placed in leakproof containers so as to protect them from contamination and spoilage. Steps must be taken to provide leakproof containers and insure this noncompliance does not reoccur.
- To be corrected by 3-22-06

3.4 (b)

REPEAT NCI

OUTDOOR HOUSING FACILITIES.

- Outdoor facilities for dogs or cats must include one or more shelter structures that are accessible to each animal in each outdoor facility, and that are large enough to allow each animal in the shelter structure to sit, stand, and lie in a normal manner, and to turn about freely. In addition to the shelter structures, one or more separate outside areas of shade must be provided, large enough to contain all the animals at one time and protect them from the direct rays of the sun. Shelters in outdoor facilities for dogs or cats must contain a roof, four sides, and a floor, and must:
 - (1) Provide the dogs and cats with adequate protection and shelter from the cold and heat;
 - (2) Provide the dogs and cats with protection from the direct rays of the sun and the direct effect of wind, rain, or snow;
 - (3) Be provided with a wind break and rain break at the entrance; and
 - (4) Contain clean, dry, bedding material if the ambient temperature is below 50 deg. F (10 deg. C). Additional clean, dry bedding is required when the temperature is 35 deg. F (1.7 deg. C) or lower.
- Four of the outdoor kennels have lost their ability to provide protection from the direct rays of the sun. The tarps on top have been blown away by the wind.
- This environment, where the dogs are not provided proper shade, affects the health of the dogs housed in these pens.
- Original correction date 5-16-05
